Stroke and blood clots - World Heart Federation But conditions like hypertension, atherosclerosis and some other blood problems can lead to the development of blood clots. Thrombosis is the name given to the formation of blood clots. When the clot blocks the blood flow to the heart or the brain, a heart attack or stroke can follow. Blood Clots - How They Form and Common Causes Most heart attacks and strokes happen when a plaque in your heart or brain suddenly bursts. Blood clots can also form when your blood doesn't flow properly. Ischemic Strokes (Clots) - strokeassociation.org Silent cerebral infarction (SCI), or "silent stroke," is a brain injury likely caused by a blood clot interrupting blood flow in the brain. It's a risk factor for future strokes which could lead to progressive brain damage due to these strokes.

Blood Clots and Strokes - Neurology - MedHelp There are some signs as to blood clots in the vein of the leg like swelling and pain. And there are certain things in the history that can be suspicious for a clotting disorder problem such as family history of blood clots in the veins of the lungs or in the legs, recurrent miscarriages, strokes at early eages. Stroke - Symptoms and causes - Mayo Clinic Ischemic stroke occurs when a blood clot blocks or plugs an artery leading to the brain. A blood clot often forms in arteries damaged by the buildup of plaques (atherosclerosis). It can occur in the carotid artery of the neck as well as other arteries. Stroke Patients Missing Out on tPA Medication - aarp.org It is not used for hemorrhagic strokes, which occur when a weakened blood vessel in or around the brain ruptures, causing bleeding into the brain; with these types of strokes, tPA would worsen bleeding.
